Higher Education Performance Dashboard

Milestone 2 : Module 4: Dashboard Planning & Prototyping

Submitted by : Adyasha Pattanaik

Storyboard Overview

The **EduVision Higher Education Performance Dashboard** storyboard serves as the conceptual design for the interactive dashboard suite to be developed in Tableau. It defines the overall dashboard structure, user navigation, key performance indicators (KPIs), visualization placement, and user interactions before implementation.

The dashboard is designed using the cleaned and processed university dataset generated in the previous milestone. It focuses on helping users explore global higher education performance through meaningful visualizations and calculated educational KPIs. The storyboard ensures that every dashboard follows a consistent layout, making the final application easy to navigate and analyze.

The dashboard suite is divided into four interconnected sections:

- **University Overview** – Presents a summary of university rankings, overall performance, and global distribution.
- **Research Analytics** – Analyzes research quality, citation performance, academic reputation, and research productivity.
- **Student Analytics** – Examines student population, faculty-to-student ratio, international student participation, and demographic indicators.
- **Country Comparison** – Compares higher education performance across different countries using ranking and research metrics.

To improve user experience, every dashboard includes common filters such as **Year, Country, Region, and University**, along with interactive navigation and cross-dashboard filtering. Users can compare universities or countries, explore trends over time, and drill down into detailed performance metrics through interactive visualizations.

This storyboard acts as a blueprint for the final dashboard development and ensures that all dashboards are visually consistent, user-friendly, and aligned with the objectives of the EduVision Higher Education Performance Dashboard project.

Filters, Navigation, Dashboard Actions & Interactive Comparisons

Global Filters

The following filters are available across all dashboards to provide a consistent and interactive user experience:

- **Year** – Defaults to the most recent year available.
 - **Country** – Single-select filter that updates dashboard visualizations based on the selected country.
 - **Region** – Single-select filter used to display regional insights and update map-based visualizations.
 - **University** – Searchable text filter for locating specific universities and updating comparison tables.
-

Navigation

A common navigation panel is available on all dashboard pages for seamless navigation between modules.

- Left-side navigation menu includes **University Overview**, **Research Analytics**, **Student Analytics**, and **Country Comparison**.
 - The currently active dashboard is highlighted for easy identification.
 - Selecting a KPI card navigates users to the corresponding dashboard containing detailed analysis (where applicable).
-

Dashboard Actions

Interactive actions improve usability and enable dynamic exploration of the data.

- Selecting a country on the **Country Comparison** dashboard filters related visualizations in the **University Overview** and **Research Analytics** dashboards.
 - Clicking a university in a chart highlights its performance across all visualizations on the current dashboard.
 - Clearing any active filter resets the dashboard to display the complete dataset.
-

Interactive Comparisons

Interactive comparison features allow users to analyze multiple universities or countries simultaneously.

- Compare **2–5 universities or countries** using multi-selection in charts.
- Hover over charts or visual elements to display detailed KPI values in tooltips.
- Comparison tables update dynamically based on the currently selected filters and dashboard interactions.
