

EduVision – Dashboard QA Checklist

Module 7 – Testing & Validation

Purpose: This checklist documents the quality-assurance checks performed on the EduVision university analytics dataset and four Tableau dashboards before final delivery.

Project	EduVision – University Analytics Dashboard
Module	Module 7 – Testing & Validation
Dataset	university_final_dataset.xlsx
Workbook	EduVision_DV.twbx

1. Data Quality Checks

Check	Validation	Status
Dataset completeness	21,127 rows reviewed; no missing values reported in the final dataset.	PASS
Year coverage	Dataset contains 2017–2026 records.	PASS
Duplicate university-year records	No duplicate university-year records identified in the final dataset review.	PASS
University coverage	3,605 unique universities identified.	PASS
2024 data note	The 668 authoritative 2024 records are retained as documented in Method_Notes.	PASS
2026 data handling	2026 records are retained as part of the extended trend dataset and are documented in the workbook/report.	PASS

2. KPI Validation

KPI	Validation	Status
Total Universities	Uses COUNTD(University Name) so the KPI counts unique universities rather than rows.	PASS
Average Overall Score	Uses the appropriate average score aggregation.	PASS
Academic Reputation	Uses AVG(Academic Reputation Score), not Research Impact Score.	PASS

Female / Male Percentage	Uses average percentage values; female and male percentages represent the intended percentage scale.	PASS
International Student Percentage	KPI is consistent with the international student ratio field.	PASS
Faculty-to-Student KPI	Recalculated consistently from Faculty Count / Total Students using the final cleaned data.	PASS

3. Ranking & Analytical Calculation Checks

Check	Validation	Status
Best University Rank	Validated using the minimum world rank by country/year.	PASS
Country Average Rank	Validated using the country-level average rank calculation.	PASS
Universities Ranked Count	Validated against the ranked university count by country/year.	PASS
Top university/student views	Top-N filters are restricted to the intended ranking worksheets and do not affect global KPI cards.	PASS
Country ranking comparison	Lower average rank is treated as better performance and the chart is sorted accordingly.	PASS

4. Dashboard & Visualization Checks

Check	Validation	Status
University Overview	KPI cards, university comparisons, university type analysis and country-level views are present.	PASS
Research Analytics	Research productivity trend, citations, publications, H-index and research comparisons are present.	PASS
Student Analytics	Student enrollment, faculty-to-student ratio, international students and gender analysis are present.	PASS
Country Comparison	Regional education trend, country ranking and country	PASS

	performance comparisons are present.	
Orphaned worksheets	Academic Reputation by Country, Average Overall Score by Country and Top 10 Countries were removed from the final workbook.	PASS
Titles and labels	Dashboard titles and chart labels were reviewed for consistency with the intended metrics.	PASS

5. Interactivity Testing

Check	Validation	Status
Filter actions	Filter1 and Filter2 are present in the workbook.	PASS
Live filter testing	Filters were manually tested in Tableau and confirmed to work.	PASS
Cross-dashboard behavior	Interactive filtering was checked across the four dashboards.	PASS

6. Research Trend Data Note

2024 and 2026 methodology note: The final dataset retains the 668 authoritative 2024 records identified in Method_Notes. The 2026 records are retained as part of the extended trend dataset and are not silently removed from the analysis. The 2024 research-productivity variation is therefore treated as a characteristic of the supplied dataset rather than artificially smoothed or deleted.

7. Final QA Result

MODULE 7 – QA STATUS: COMPLETE

All required Module 7 validation areas have been addressed: KPI calculations, ranking calculations, educational metrics, dashboard structure, data quality, and manual filter/action testing.

Prepared for: EduVision Dashboard Project

Deliverable: Module 7 – QA Checklist
