

EduVision_DV

Higher Education Performance Dashboard — Dashboard Guide

This guide walks through each of the four dashboards in the EduVision_DV Power BI report: what each KPI card, chart, and filter shows, and how to navigate between them.

Dashboards covered:

- University Overview
- Research Analytics
- Student Analytics
- Country Comparison

Navigation: all four dashboards share a top navigation bar (University Overview / Research Analytics / Student Analytics / Country Comparison) and four synchronized slicers — country, region, year, subject_field — so a filter selection on one page carries over to the others.

1. University Overview

KPI Cards

- Total Universities — distinct count of universities in the filtered dataset
- Weighted Faculty Ratio — students per faculty member, weighted by university size
- Avg Overall Score — average QS-style overall score
- Total Publications — sum of publications across all universities
- Weighted Intl Students % — international student share, weighted by university size
- Top Global Rank (two cards) — name of the #1-ranked university, shown per selection

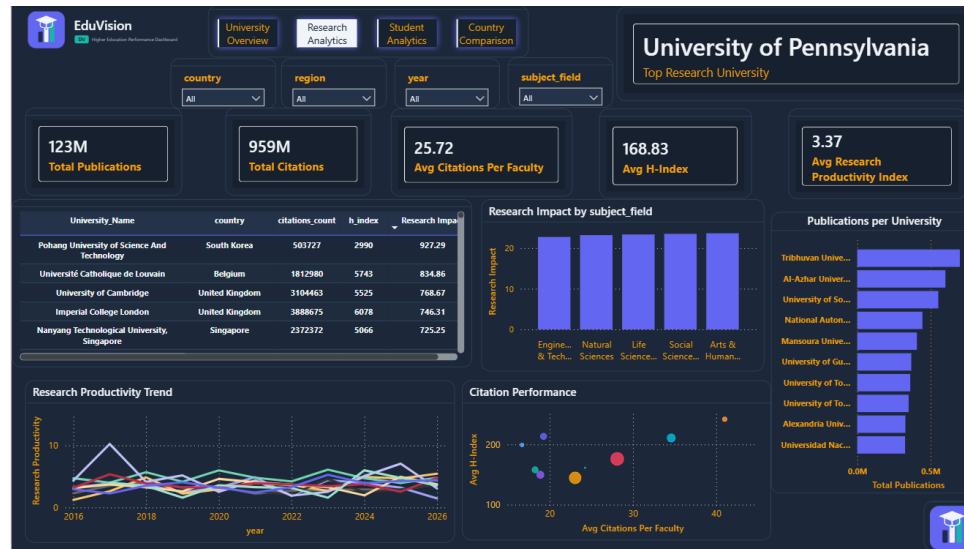

Visuals

- Table: Top-ranked universities — Rank, University Name, Country, Score, sorted ascending by rank
- Bar chart: International Students % by region
- Donut chart: Universities per region — share of total universities by region
- Bar chart: Publications per University — Sum of publications, top universities
- Bar chart: Faculty-to-student ratio by region

Notes

- world_rank uses ascending sort / "is less than or equal to" filters rather than Top N, since Top N selects the largest numeric values — the wrong direction for a field where 1 = best.
- Filter to a single year when reading the ranking table, since the source data has one row per university per year and the same institution can otherwise appear more than once.

2. Research Analytics

KPI Cards

- Total Publications — sum of publications_count
- Total Citations — sum of citations_count
- Avg Citations Per Faculty — average citation output per faculty member
- Avg H-Index — average h-index across universities
- Avg Research Productivity Index — average productivity score
- Top Research University — university with the highest Research Impact Score

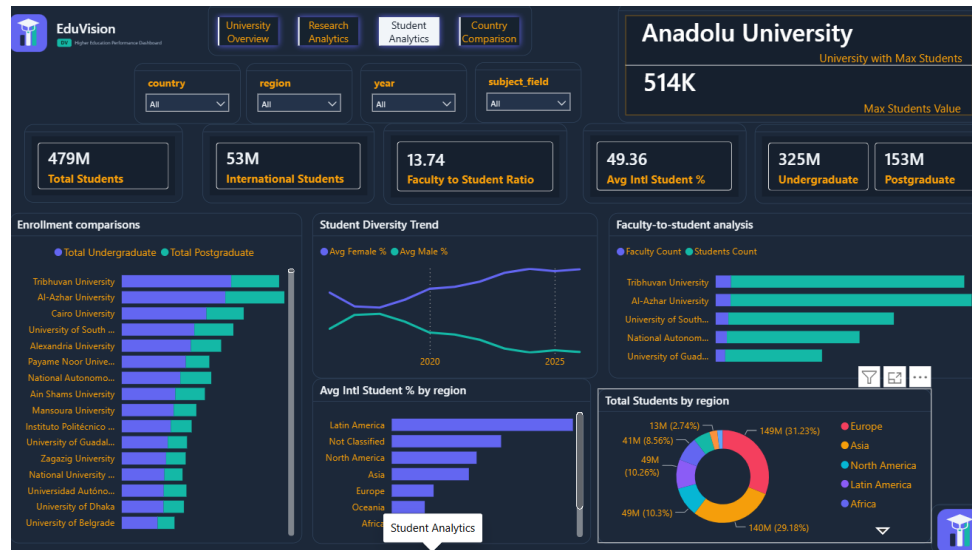

Visuals

- Table: Top research institutions — University, Country, Citations, H-Index, Research Impact Score
- Bar chart: Research Impact by subject_field
- Bar chart: Publications per University
- Line chart: Research Productivity Trend by year
- Scatter chart: Citation Performance — Avg Citations Per Faculty vs Avg H-Index, bubble size = publications

Notes

- Research Impact Score = $0.5 \times \text{citations_score} + 0.3 \times \text{norm}(\text{citations_per_faculty}) + 0.2 \times \text{norm}(\text{h_index})$, each term normalized 0-100.
- Top Research University uses `TOPN(1, ALLSELECTED(university_name), ...)` so the result still respects active year/region slicers.

3. Student Analytics

KPI Cards

- Total Students — sum of total_students
- International Students — sum of international_students_count
- Faculty to Student Ratio — average students per faculty member
- Avg Intl Student % — average international student share
- Undergraduate / Postgraduate — sum of undergraduate_count / postgraduate_count
- University with Max Students / Max Students Value — the single largest university by enrollment

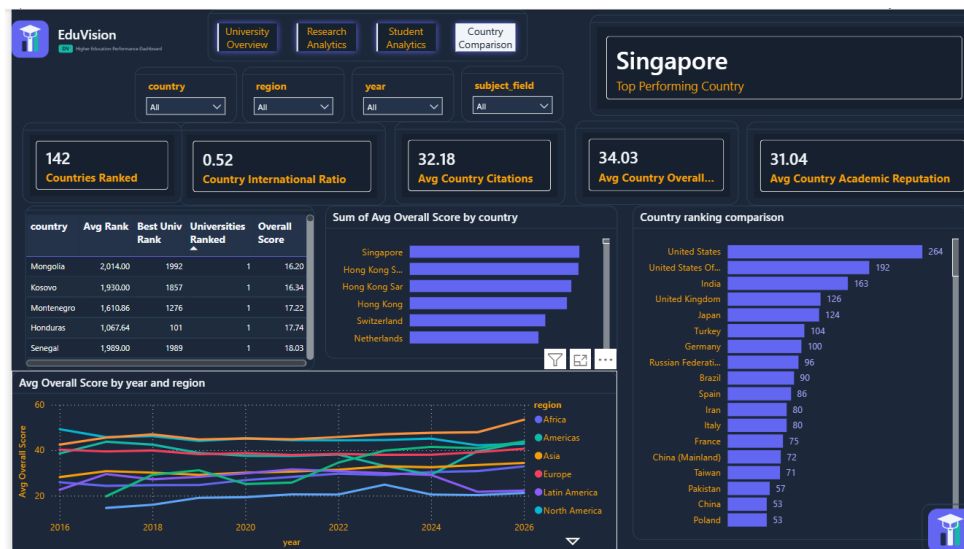

Visuals

- Stacked bar chart: Enrollment comparisons — Total Undergraduate vs Total Postgraduate per university
- Line chart: Student Diversity Trend — Avg Female % vs Avg Male % by year
- Bar chart: Avg Intl Student % by region
- Bar chart: Faculty Count vs Students Count per university
- Donut chart: Total Students by region

Notes

- gender_ratio is a text field (e.g. "55-45") and cannot be charted numerically; the diversity trend uses the numeric female_percentage / male_percentage columns instead.
- The hyphen separator in gender_ratio (rather than a colon) prevents spreadsheet software from auto-converting the value into a time format on open.

4. Country Comparison

KPI Cards

- Countries Ranked — distinct count of countries
- Country International Ratio — average international student ratio, one value per country
- Avg Country Citations — average citations, one value per country
- Avg Country Overall Score — average overall score, one value per country
- Avg Country Academic Reputation — average reputation score, one value per country
- Top Performing Country — country with the highest average overall score

Visuals

- Table: Country ranking comparison — country, Avg Rank, Best University Rank, Universities Ranked
- Bar chart: Sum of Avg Overall Score by country
- Bar chart: Country ranking comparison — universities ranked per country, top countries
- Line chart: Avg Overall Score by year and region

Notes

- country_avg_* fields repeat once per university row within a country, so plain AVERAGE()/SUM() over-weights countries with many universities. All country-level KPI cards use AVERAGEX(VALUES(country), ...) to count each country exactly once.
- The country ranking table is built from a dedicated summary table (SUMMARIZE), not the main university-level table, for the same reason.
