DASHBOARD STORY BOARDS

STORY BOARD 1: University Overview

What this dashboard tells the viewer:

- The KPI row gives the headline numbers for whatever slice is filtered — the #1-ranked university, how many universities are in view, and averages for overall score, international student mix, faculty ratio, and total publications.
- The Top 10 table and score-trend line indicate which institutions currently lead and whether that leadership is stable or shifting year over year.
- The region donut and international/faculty-ratio panels indicate how the ranked universities are distributed geographically, and whether region correlates with internationalization or staffing levels.
- Global filters (Year / Region / Country / Subject Area) in the header scope every panel on this dashboard — there's no separate local filter here since the view is aggregate, not single-institution.

STORY BOARD 2: Research Analytics

What this dashboard tells the viewer:

- The KPI row summarizes research strength for the current filter — total publications and citations, plus averages for citations per faculty, h-index, Research Productivity Index, and Research Impact Score.
- The Top Research Institutions table and the citations-vs-reputation scatter indicate which universities lead on research output versus prestige, and flag outliers where the two diverge.
- The productivity trend line indicates whether research output is accelerating or plateauing over the 2016–2026 window.
- The subject-field and region panels indicate where research strength concentrates — which fields and which parts of the world are producing the most cited work.
- Same global filters as every dashboard (Year / Region / Country / Subject Area); no additional local filter needed since Subject Area already lives in the global bar.

STORY BOARD 3: Student Analytics

What this dashboard tells the viewer:

- The KPI row indicates the scale and makeup of the student body in view — total enrollment, average international student share, average faculty-to-student ratio, average female percentage, and the undergraduate/postgraduate split.
- The international-students map and faculty-ratio bar indicate which regions are more internationalized or more generously staffed.
- The gender-split trend line indicates whether diversity balance is improving over time, while the country-level gender bar indicates where the largest gaps sit today.
- The undergraduate-vs-postgraduate stacked bar indicates which top universities skew toward research-heavy postgraduate populations versus large undergraduate bodies.
- Same global filters apply; no local filter box on this dashboard.

STORY BOARD 4: Country Comparison

What this dashboard tells the viewer:

- This is the one dashboard with a local control: Country A / Country B selectors plus a swap button, since the global Country filter can only hold one selection at a time and a comparison needs two.
- The mirrored KPI row indicates how each country stacks up on the metrics already computed per-country in the dataset (avg overall score, avg academic reputation, avg citations, avg international ratio).
- The diverging bar chart indicates which specific metrics separate Country A from Country B, and by how much.
- The ranking table, top-performers bar, and choropleth indicate where each country sits globally and regionally, while the trend line indicates whether the gap between the two is widening or closing over time.
