

EduVision – KPI Definitions

Definitions and interpretation of dashboard metrics

1. Core University KPIs

KPI	Definition
World Rank	Global ranking position of a university in the source ranking dataset.
National Rank	Ranking position of a university within its country.
Overall Score	Overall performance score supplied by the ranking/source dataset.
Academic Reputation Score	Indicator representing academic reputation as supplied by the source dataset.
Employer Reputation Score	Indicator representing employer reputation as supplied by the source dataset.
Citations Score	Indicator representing citation-related research performance.
Publications Count	Number of publications associated with the university.
Citations Count	Number of citations associated with the university.
Citations per Faculty	Citation performance normalized by faculty count.
H-index	Research impact indicator reflecting both publication output and citation impact.

2. Research KPIs

KPI	Definition
Research Output Score	Composite/derived score used to represent research output performance in the project analytical model.
Research Productivity Index	Derived indicator used to compare research output relative to the relevant university/faculty context.
Academic Reputation Score	Academic reputation measure used as a research/academic quality indicator.
Citations Score	Citation-based performance indicator used to compare research impact.

3. Student and Faculty KPIs

KPI	Definition
Total Students	Total student population represented in the dataset.
International Students Count	Number of international students.
International Student Ratio	International students represented as a proportion of total students.
Faculty Count	Number of faculty members.
Faculty-to-Student Ratio	Relationship between faculty count and student population.
Female Percentage	Percentage of the relevant population represented as female.
Male Percentage	Percentage of the relevant population represented as male.
Undergraduate Count	Number of undergraduate students.
Postgraduate Count	Number of postgraduate students.

4. Country Comparison KPIs

KPI	Definition
Country Average Rank	Average university rank for universities represented for the country.
Universities Ranked Count	Number of universities represented/ranked for the country in the analytical dataset.
Best University Rank	Best (lowest numerical) university rank recorded for the country.
Country Average Overall Score	Average overall score of universities represented for the country.
Country Average Academic Reputation	Average academic reputation score for the country.
Country Average Citations	Average citations-related score for the country.
Country Average International Ratio	Average international student ratio for the country.

5. Interpretation Rules

- For rank fields, a lower numerical rank generally indicates stronger ranking performance.
- For score fields, higher values generally indicate stronger performance unless the source definition states otherwise.
- Percentages and ratios should be interpreted within the selected filter context.
- Country-level KPIs are aggregates and should not be treated as the score of a single university.
- Derived KPIs should be interpreted according to the calculation logic implemented in the final analytical dataset/dashboard.
